

# SUSTAINABILITY AT STRATHMORE PRIMARY SCHOOL

## Our Sustainability Vision

*“Strathmore Primary School nurtures responsible citizens who make informed decisions to reduce their impact on the environment. Our school is working as a whole school community to achieve a sustainable environment. Staff and students are positive role models for sustainability in our community”*

## Strathmore Primary School is a ResourceSmart School

ResourceSmart Schools is a Victorian Government initiative that helps schools to embed sustainability in everything they do.

This is a long term commitment which will see our school take actions to minimise waste, save energy and water, promote biodiversity and reduce greenhouse emissions.

## Taking Action

At Strathmore Primary School we are working towards embedding sustainability into everything we do through actions such as:

- Encouraging students to bring rubbish free lunchboxes
- Tracking our electricity, gas and water use
- Incorporating sustainability into our curriculum
- Classroom recycling and composting
- Water harvested from two tanks used to flush toilets and water grounds.
- Participating in events such as World Environment Day, Water Week & Clean Up Australia Day
- Online communications
- E-waste recycling
- Active Green Team and Garden Club
- Actively participate in the Moonee Valley Council School Environment Network
